System Instructions

Setup

Install

Create the codio box using the ruby on rails preset for the framework and clone the team repository while in your home directory, use the following command:

```
git clone https://git.shefcompsci.org.uk/com1001-2019-20/team04/project
```

Once you have your codio box set up and the repository cloned into your home directory navigate so that you are within the repository and ensure that you are on the latest version of the master branch. Then you will need to run the bundler as follows:

```
gem install bundler
```

```
bundle install
```

If this produces any errors then it is either a problem with the setup of the box in which case setting up from scratch may solve the issue. Check that your ruby version is 2.6.5 using the command:

```
ruby -v
```

Or it's an issue with the compatibility of the gems that are being bundled and they are no longer compatible, if this happens there's not a lot we can do. Simply try to install the gems separately and follow the errors as they usually contain a version fix to make things work.

Testing Setup

The system should now be set up and now we need to test that everything is functioning as is expected, use the following command to run the unit tests:

```
rake unittest
```

Then run the full system testing using the command:

```
cucumber
```

If any of these fail then the best course of action is to delete the box and try the setup again from scratch, the master branch is set up so that it will never fail these tests in the codio box environment.

Running the system

Use rake to run the system, currently there are 2 modes to do this in, you can either wipe the database and rebuild it with a fresh set of data before you launch or you can launch with the database as is. To rebuild the database use:

```
rake testrun
```

If you don't want to erase the data set then use:

```
rake run
```

System Pointers

User accounts

Overall there are 6 different user accounts which have the following usernames, passwords and roles:

Username	Password	Role
admin	admin	Admin of the system, has access to all the admin tools like verifying users and suspending them.
user	user	Standard verified user, can make bookmarks and add ratings.
role 1	role 1	Unverified user, cannot login until verified by the system admin.
role 2	role 2	Same as role 1.
role 3	role 3	Same as user.
role 4	role 4	Same as user.

Admin tools

All of the admin tools are accessible by heading to the Admin button at the top of the page while logged in as an admin user. When on this page you will be presented with the following options:

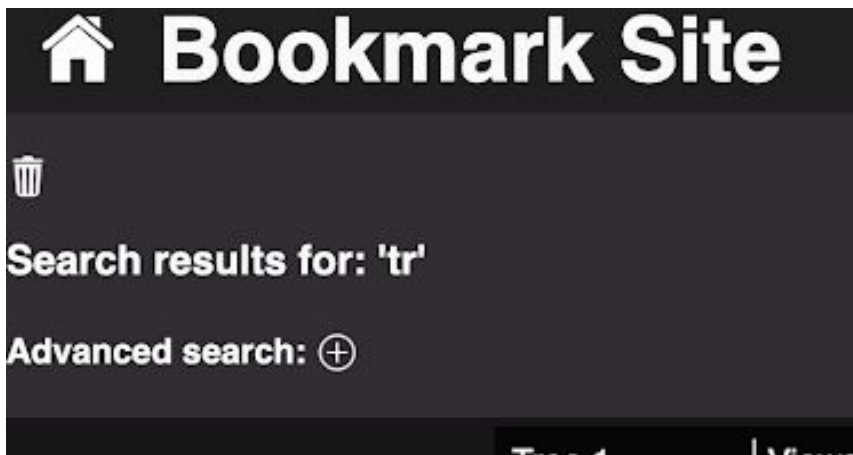

- Approve New Users - Takes you to a list of all the unapproved accounts on the system, you can choose to verify users here and this will mean that they can log in and create bookmarks and add ratings.
- Reported Bookmarks - From here you can see all the reports on different bookmarks, when you click view details you will be able to see the message about the report that the user has left, edit or delete the bookmark and also mark the report as resolved.

- View Suspended Accounts - Will show all the suspended accounts with the option to reinstate each account.
- List of Verified users - This is the list that lets you promote users to admin, reset their passwords or suspend each account. Will however not let you do so to an admin account as all admin accounts are trusted to demote themselves when needed.

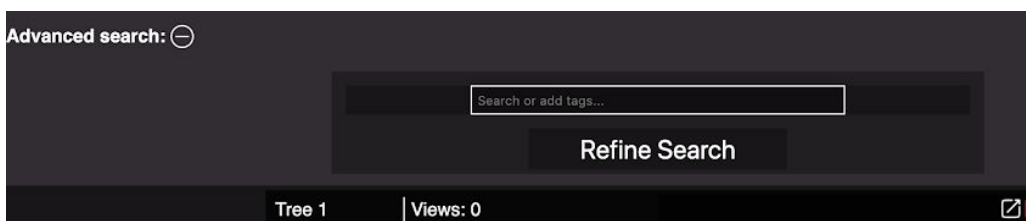

Searching

Don't miss the search bar in the header of the site that will search through all of the bookmarks in the database. However when you do this you will get the option to do an 'advanced search' which lets you see only bookmarks that need the original searched phrase and have the tag selected in them. This system is a little complicated at the moment so here's a quick guide to using it:

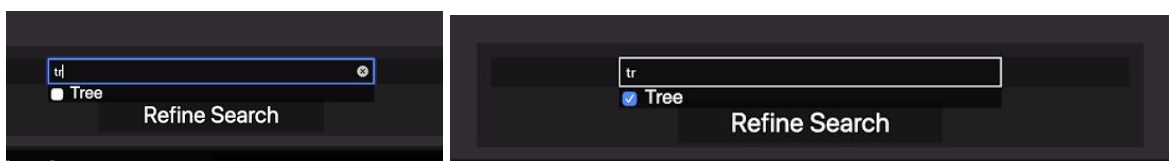

1. Click the + sign next to the advance search text.

2. This should open the advanced search window, type the name of or the start of the name of the tag that you want to search for into the 'search or add tags...' textbox.

3. Select your tag using the checkbox next to it's name in the dropdown list that appears.

4. Click refine search and you should be on a page with only results that fit the query string and the tags you've set.

 **Bookmark Site**

Search results for: "

Advanced search: 

Tree 1	Views: 0	 
Tree 2	Views: 0	 
Tree 3	Views: 0	 
Tree 4	Views: 0	 
Tree 5	Views: 0	 
Tree 6	Views: 0	 

The add bookmarks page also uses this system for adding tags to each bookmark and the editing page for bookmarks, the only difference is if you want to add bookmarks then you type as if you're searching the name that you want to add and then click the add tag button and it will make a new tag for you.

Registration

Please note that there is a restriction on the type of password that you can use, to quote the site: `"*Note: Password must be at least 8 characters long and contain a number and a special character (#?!@$%^&*-_)"` (The number of times people have gotten this wrong when testing has been astounding.)

User Stories

Initial Stories

Essential Features

- As a guest, I should be able to access the system without a login.
- As a guest, I should be able to click on and view a bookmark.
- As a guest, I am able to search through the bookmarks using tags.
- As a guest, I am able to search through the bookmarks using keywords.
- As an employee, I will need to register an account but I should be able to use all the guest features whilst waiting for admin approval.
- As an employee, I should login with a username and password.
- As an employee, I would want to add a bookmark .
- As an employee, I would want to tag a bookmark with keywords.
- As an employee, I would want to remove a bookmark created by me.
- As an employee, I would want to leave a comment on the bookmark.
- As an employee, I would want to rate a bookmark.
- As a guest, I am able to report a bookmark to the admin.
- As an employee, I would want to edit my bookmark.
- As an employee, I would want to add a bookmark to my favourites list.
- As a guest, I am able to supply an explanation of the error with my report.
- As an admin I should be able to view a list of unapproved user accounts and verify those that are employees at the company.
- As an admin I should be able to view a list of reported bookmarks sorted by date reported.
- As an admin I should be able to resolve reports on bookmarks by either deleting, editing or marking the report as resolved.
- As an admin I should be able to view a list of all the suspended user accounts.
- As an admin I should be able to suspend a users account so that they can no longer log in to the system.
- As an admin I should be able to delete a suspended user account so that it is no longer on the system.
- As an admin I should be able to reinstate a user's account once suspended.
- As an admin I should be able to promote another user to an admin.
- As an admin I should be able to demote my own account to a regular user.
- As an admin I should be able to reset the password of any user.
- As an admin I want users making accounts to use sufficiently secure passwords.

Non-essential Features

- As a guest, I am able to sort search results by date created.
- As a guest, I am able to sort search results by their rating.
- As a guest, I am able to sort a search result by how frequently used.
- As an admin I should be able to view a list of verified users.

- As an admin I should be able to sort the list of verified users by name.
- As an admin I should be able to sort the list of verified users by date created.
- As an admin I should be able to view a specific user's edit history.
- As an admin I should be able to view the edit history of a specific bookmark.
- As an employee, I would want to sort my favourites list of bookmarks into folders.
- As an employee, I would want to be able to see my viewing history.
- As an admin, I should be able to sort the reported bookmarks by category.
- As an employee, I should be restricted in the number of tags I can assign to a single bookmark.
- As an employee, I should have my department details on my account.
- As an employee, When i make a bookmark my departmental details should automatically be tagged to the bookmark.
- As an employee, I can restore recently deleted bookmarks.
- As an employee, I can make private bookmarks which can only be seen by myself, and selected people.

Final Stories

The edits here are marked with green to indicate an addition and red with strikethrough to indicate a deletion.

Essential Features

- As a guest, I should be able to access the system without a login.
- As a guest, I should be able to click on and view a bookmark.
- As a guest, I am able to search through the bookmarks using tags.
- As a guest, I am able to search through the bookmarks ~~titles~~ using keywords.
- As an employee, I will need to register an account but I should be able to use all the guest features whilst waiting for ~~an admin to verify my account~~ ~~admin approval~~.
- As an employee, I should login with an ~~email~~ ~~username~~ and password.
- As an employee, I would want to add a bookmark.
- As an employee, I would want to tag a bookmark with keywords.
- As an employee, I would want to remove a bookmark created by me.
- As an employee, I would want to leave a comment on ~~a~~ ~~the~~ bookmark.
- As an employee, I would want to rate a bookmark.
- As a guest, I am able to report a bookmark to the admin.
- As an employee, I would want to edit my bookmark.
- As an employee, I would want to add a bookmark to my favourites list.
- As a guest, I am able to supply an explanation of the error with my report.
- As an admin I should be able to view a list of unapproved user accounts and verify those that are employees at the company.
- As an admin I should be able to view a list of reported bookmarks sorted by date reported.
- As an admin I should be able to resolve reports on bookmarks by either deleting, editing or marking the report as resolved.
- As an admin I should be able to view a list of all the suspended user accounts.

- As an admin I should be able to suspend a users account so that they can no longer log in to the system.
- As an admin I should be able to delete a suspended user account so that it is no longer on the system.
- As an admin I should be able to reinstate a user's account once suspended.
- As an admin I should be able to promote another user to an admin.
- As an admin I should be able to demote my own account to a regular user.
- As an admin I should be able to reset the password of any user.
- As an admin I want users making accounts to use sufficiently secure passwords.

Non-essential Features

- As a guest, I am able to sort search results by date created.
- As a guest, I am able to sort search results by their rating.
- As a guest, I am able to sort a search result by how frequently used.
- As an admin I should be able to view a list of verified users.
- As an admin I should be able to sort the list of verified users by name.
- As an admin I should be able to sort the list of verified users by date created.
- As an admin I should be able to view a specific user's edit history.
- As an admin I should be able to view the edit history of a specific bookmark.
- As an employee, I would want to sort my favourites list of bookmarks into folders.
- As an employee, I would want to be able to see my viewing history.
- As an admin, I should be able to sort the reported bookmarks by category.
- As an employee, I should be restricted in the number of tags I can assign to a single bookmark.
- As an employee, I should have my department details on my account.
- As an employee, When i make a bookmark my departmental details should automatically be tagged to the bookmark.
- As an employee, I can restore recently deleted bookmarks.
- As an employee, I can make private bookmarks which can only be seen by myself, and selected people.

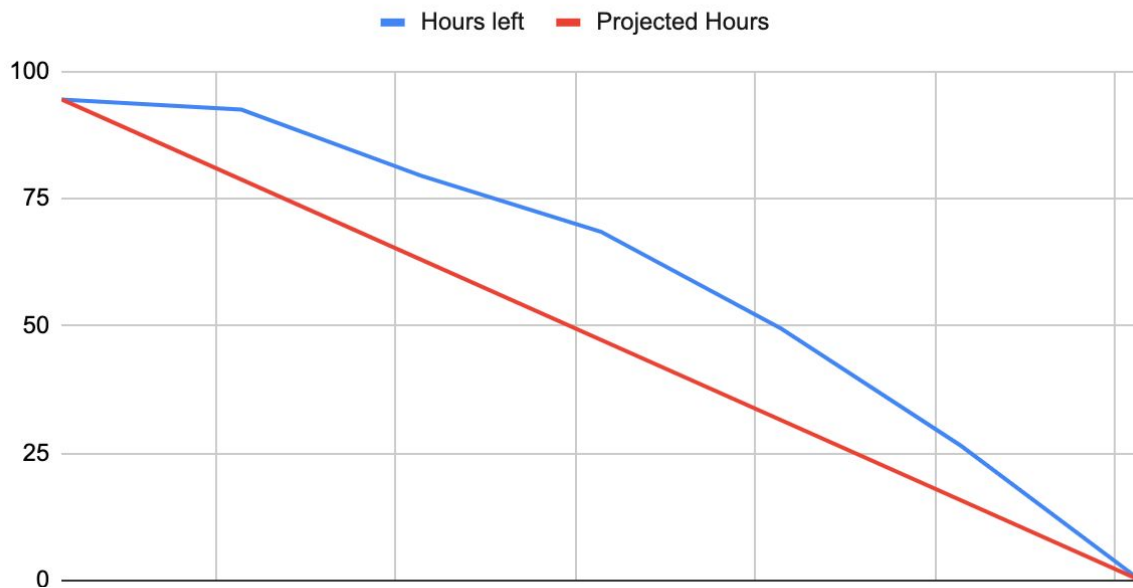

Explanation of changes

Not a lot actually changed in our stories from the initial set that we pitched to the clients at the end of the last meeting, most of the changes listed above are to do with specificity of the system like the admin account approval story. One change did occur on review of the client meetings we changed the login from a user name to an email as it makes things a lot easier and from what we were given having an email as a login name shouldn't be a problem for the client and may improve how well employees retain their 'usernames' if they are their emails.

Iteration Breakdown

Graph 1 - This shows the graph for both iterations this was done as the second iteration was only the last data point on this graph as the progress was marked off once every 2 weeks, thus the second iteration does not reveal anything useful about the progress in this period.

Burndown Chart

Iteration 1

Planned Stories

- As a guest, I should be able to access the system without a login.
- As a guest, I should be able to click on and view a bookmark.
- As a guest, I am able to search through the bookmarks using tags.
- As a guest, I am able to search through the bookmark titles using keywords.
- As an employee, I will need to register an account but I should be able to use all the guest features whilst waiting for an admin to verify my account.
- As an employee, I should login with an email and password.
- As an employee, I would want to add a bookmark.
- As an employee, I would want to tag a bookmark with keywords.
- As an employee, I would want to remove a bookmark created by me.
- As a guest, I am able to report a bookmark to the admin.
- As an employee, I would want to edit my bookmark.
- As a guest, I am able to supply an explanation of the error with my report.
- As an admin I should be able to view a list of reported bookmarks sorted by date reported.
- As an admin I should be able to resolve reports on bookmarks by either deleting, editing or marking the report as resolved.

- As an admin I should be able to view a list of all the suspended user accounts.
- As an admin I should be able to reinstate a user's account once suspended.
- As an admin I should be able to promote another user to an admin.
- As an admin I should be able to demote my own account to a regular user.
- As an admin I should be able to reset the password of any user.
- As an admin I want users making accounts to use sufficiently secure passwords.

Work Breakdown

Zbigniew Lisak and Jacob Crawley took on most of the development of the meat of the system for these stories, this includes things like making the class that deals with the database, adding all the sites to the controller and dropping the outputs into the correct points using the templated HTML.

Samuel Kent handled almost all of the testing for this iteration as well as designing the HTML and CSS for each of the stories. PingChen Lin also assisted with the design of the HTML. A little design for the database was done by Modestas Talanskas, Yi Jing Ng and Yao Li on the database.

Iteration 2

The second iteration had a much smaller time frame and so is considerably less packed with things to do. That is why there are a lot less items in this section.

Planned Stories

- As an employee, I would want to leave a comment on a bookmark.
- As an employee, I would want to rate a bookmark.
- As an employee, I would want to add a bookmark to my favourites list.
- As an admin I should be able to view a list of unapproved user accounts and verify those that are employees at the company.
- As an admin I should be able to suspend a users account so that they can no longer log in to the system.
- As an admin I should be able to delete a suspended user account so that it is no longer on the system.

Work Breakdown

Samuel Kent, Zbigniew Lisak, Jacob Crawley handled different stories in this iteration with each person testing and merging their own branches using the assign feature on gitlab to ensure that someone else checked each branch before it was merged. PingChen Lin also did a little work on this iteration making the profile page for the user.

Testing

Testing Strategy

Each branch has been tested using the automated system testing and the unit testing before being merged into the development, this means that we can always check if we have broken the system by running 'cucumber' or 'rake unitest'.

Cucumber Tests

This is the full output of the final cucumber test:

Feature: Adding bookmarks

```
Scenario: Adding bookmarks as default user
  Given database is reset
  Given I am on the homepage
  When I follow "Login" within "header"
  When I fill in "user-email" with "user" within "section"
  When I fill in "user-password" with "user" within "section"
  When I press "submit-login" within "section"
  Then I should be on the homepage
  When I follow "Create Bookmark" within "header"
  When I fill in "bookmark-title" with "BBC" within "main"
  When I fill in "bookmark-link" with "bbc.co.uk" within "main"
  When I fill in "bookmark-description" with "Link to the BBC." within "main"
  When I click "#create-bookmark" within "main"
  Then I should see "Bookmark added" within "main"
  When I follow "Go back" within "main"
  Then I should see "BBC" within "main"
  When I follow "BBC" within "main"
  Then I should see "BBC" within ".bookmark-title"
  Then I should see "Link to the BBC." within ".bookmark-description"
  Then I should see "by Testing User" within ".detailed-info"
  Then I should see "Rating: 0/5 (0)" within ".rating"

When I fill in "search_query" with "Google" within "form" # features/step_definitions/web_steps.rb:38
When I press "Search" within "form" # features/step_definitions/web_steps.rb:20
Then I should see "Search results for: 'Google'" within "h3" # features/step_definitions/web_steps.rb:106
When I follow "home-link" within "h3" # features/step_definitions/web_steps.rb:26
Then I should be on the homepage # features/step_definitions/web_steps.rb:194

Scenario: Exit a blank search and head back to the homepage # features/search_via_keyword.feature:98
Given I am on the homepage # features/step_definitions/web_steps.rb:12
When I fill in "search_query" with "-----" within "form" # features/step_definitions/web_steps.rb:38
When I press "Search" within "form" # features/step_definitions/web_steps.rb:20
Then I should see "Search results for: '-----'" within "section" # features/step_definitions/web_steps.rb:106
When I follow "home-link" within "section" # features/step_definitions/web_steps.rb:26
Then I should be on the homepage # features/step_definitions/web_steps.rb:194

Feature: Viewing tags on Bookmarks

Scenario: view tags on google bookmark # features/tag_bookmarks.feature:2
Given database is reset # features/step_definitions/database_steps.rb:13
Given I am on the homepage # features/step_definitions/web_steps.rb:12
When I follow "Google" within "div#1" # features/step_definitions/web_steps.rb:26
Then I should see "#Search engines" # features/step_definitions/web_steps.rb:106
Then I should not see "#Bad search engines" # features/step_definitions/web_steps.rb:127
Then I should not see "#Tree" # features/step_definitions/web_steps.rb:127

Scenario: view tags on Bing bookmark # features/tag_bookmarks.feature:10
Given I am on the homepage # features/step_definitions/web_steps.rb:12
When I follow "Bing" within "div#2" # features/step_definitions/web_steps.rb:26
Then I should see "#Search engines" # features/step_definitions/web_steps.rb:106
Then I should see "#Bad search engines" # features/step_definitions/web_steps.rb:106
Then I should not see "#Tree" # features/step_definitions/web_steps.rb:127

Scenario: view tags on youtube video bookmark # features/tag_bookmarks.feature:17
Given I am on the homepage # features/step_definitions/web_steps.rb:12
When I follow "Youtube Video" within "div#3" # features/step_definitions/web_steps.rb:26
Then I should not see "#Search engines" # features/step_definitions/web_steps.rb:127
Then I should not see "#Bad search engines" # features/step_definitions/web_steps.rb:127
Then I should not see "#Tree" # features/step_definitions/web_steps.rb:127

Scenario: view tags on youtube video bookmark # features/tag_bookmarks.feature:24
Given I am on the homepage # features/step_definitions/web_steps.rb:12
When I follow "Youtube Video" within "div#3" # features/step_definitions/web_steps.rb:26
Then I should not see "#Search engines" # features/step_definitions/web_steps.rb:127
Then I should not see "#Bad search engines" # features/step_definitions/web_steps.rb:127
Then I should not see "#Tree" # features/step_definitions/web_steps.rb:127

Scenario: view tags on tree1 # features/tag_bookmarks.feature:31
Given I am on the homepage # features/step_definitions/web_steps.rb:12
When I follow "Tree 1" # features/step_definitions/web_steps.rb:26
Then I should not see "#Search engines" # features/step_definitions/web_steps.rb:127
Then I should not see "#Bad search engines" # features/step_definitions/web_steps.rb:127

Then I should see "#Tree" # features/step_definitions/web_steps.rb:106

Feature: view bookmark

```
Scenario: Click on first bookmark # features/view_bookmark.feature:2
  Given database is reset # features/step_definitions/database_steps.rb:13
  Given I am on the homepage # features/step_definitions/web_steps.rb:12
  When I click ".bookmark-details" within "div#1" # features/step_definitions/web_steps.rb:32
  Then I should be on bookmark specifics # features/step_definitions/web_steps.rb:194
  Then I should see "Google" within ".bookmark-title" # features/step_definitions/web_steps.rb:106
  Then I should see "Link to the popular search engine google." within ".bookmark-description" #
features/step_definitions/web_steps.rb:106
  Then I should see "Created on 2020-04-06 by Testing Admin" within ".detailed-info" #
features/step_definitions/web_steps.rb:106
  Then I should see "Rating: 2.5/5 (4)" within ".rating" # features/step_definitions/web_steps.rb:106
```

Feature: view homepage

```
Scenario: opens website # features/view_homepage.feature:2
  Given database is reset # features/step_definitions/database_steps.rb:13
  Given I am on the homepage # features/step_definitions/web_steps.rb:12
  Then I should be on the homepage # features/step_definitions/web_steps.rb:194
```

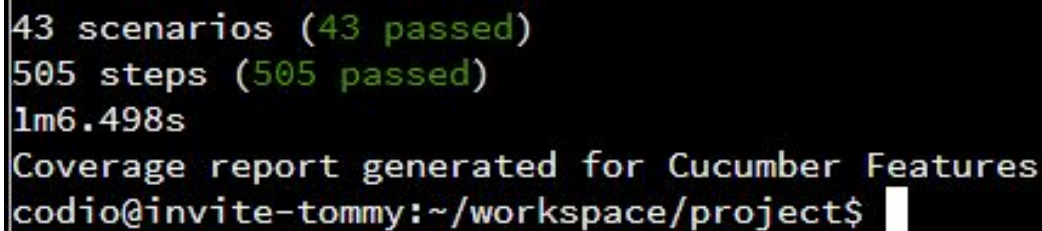

43 scenarios (43 passed)

505 steps (505 passed)

0m11.134s

Coverage report generated for Cucumber Features to /Users/kent_sam/Documents/COM1001-group-project/coverage. 609 / 1119 LOC (54.42%) covered.
